REMODELING 101

Remodeling, start to finish

*What it really takes to plan, price and build
a remodel, from a general contractor's side
of the table.*

Swipe to begin

START WITH YOU

Questions to ask yourself first

- 01 What's driving the project?
- 02 How long will you stay in the home?
- 03 What range feels right to invest?

IF YOU'VE REMODELED BEFORE

What worked, and what would you change? Bring those lessons to your first meeting.

ABOUT US

Family-built in Charlotte for over 30 years

30+

YEARS BUILDING

1

TEAM, DESIGN TO
BUILD

Kitchens, baths and additions. Formerly Spain Construction: same family, same team, same standards, under a new name.

S

OUR TEAM

The people behind every project

Project Consultant

Your guide from first call to signed contract

Design Team

Space planning, cabinetry and every selection

Production Manager

Reviews every plan before you sign

Project Manager

Owns schedule, budget and the build team

Superintendent

On site daily, running the work and quality

Office Team

Portal, scheduling, billing and questions

Our designers hold NKBA credentials, and our site superintendents are working toward NARI's Certified Remodeling Project Manager credential.

OUR WORK

A few recent projects

Total Home Renovation | Montclair

Primary Bath Renovation
Cotswold

Covered Porch + Office
Addition
Myers Park

WHERE TO START

Who to call first? There's no wrong answer.

Architect

THE SHELL

Footprint and structure • Building code and zoning
• Construction drawings

Design-build team

THE ROOMS INSIDE IT

NKBA-certified designers • Space planning and function • Cabinetry • Tile, fixtures, finishes

Interior designer

FINISHES AND FURNISHINGS

Plans and renderings • Cabinets, tops and tile • Furniture, rugs and paint

We enjoy partnering early with architects and designers, but it is never required.

Four phases, one clear path

01 Reserve Your Place

Consultation, design agreement and your design start date

02 Design Your Space

Plans, selections and budget, developed together

03 Prepare to Build

Final review, meet your build team, sign a fixed-price contract

04 Build

Your project comes to life, with updates along the way

Each phase has a clear finish line. We don't move forward until the last one is complete.

Reserve your place

- Consultation at your home: goals, must-haves and budget
- A paid design agreement reserves your spot
- Your projected design start date within 48 hours
- Updates every two weeks until design begins

Why design is a paid agreement

Design is real work

Measurements, plans, scope and pricing take weeks of skilled time.

Your project gets focus

We limit how many projects are in active design at once.

A price you can trust

A fixed price only comes from a complete, fully specified plan.

It also means you work with the team who will build it, from the very first drawing.

Design your space

- Site walk and measurements
- Floor plans and selections, developed together
- A field review of your home by our team
- An early budget range, refined as design develops

WHAT YOUR DESIGN INCLUDES

Drawings of your existing space, new floor plans, an electrical plan, elevations of every wall and cabinet run, and 3D renderings.

THE STEP MOST HOMEOWNERS NEVER HEAR
ABOUT

Plans checked on site, before they're final

During design, our team walks your home, from framing to plumbing, electrical and HVAC. We uncover what is behind the walls and what your house will allow, then share what we found and adjust the plan before the price is set.

Load-bearing walls

Plumbing and venting paths

Electrical panel capacity

Duct routes

Prepare to build

- Our production team reviews your complete plan
- A field walk with your Project Manager and Site Superintendent
- Fixed-price contract signed; construction start date secured

You meet the people building your project before you sign.

Build

- Selections ordered promptly
- Progress updates and photos in your client portal
- Design team check-ins throughout construction

MINOR VS. MAJOR

Two very different projects

MINOR
(cosmetic)

MAJOR
(structural)

WHAT IT IS

Same layout, new finishes

Full gut, wall removal, additions

WHO'S INVOLVED

Our design and build team

Adds a structural engineer, often an architect

DESIGN TO CONTRACT

2–3 months

5–9 months, sometimes up to a year

PERMIT

Interior work: typically issued right away

Additions: 2–3 months, longer with stormwater or historic district review

CONSTRUCTION

About 12 weeks

About 5–6 months

MAJOR PROJECTS

What stretches a major timeline

01 Size and scope

More rooms, more trades, more decisions.

02 Outside partners

Architects and engineers add review time.

03 Your availability

Meetings and selections move at your pace.

04 Stormwater and forestry review

Common with additions.

05 Zoning

Setbacks and other rules under Charlotte's UDO.

WORTH CHECKING EARLY

An HOA or a historic district can add its own design approval step.

Why we don't quote by the square foot

Square footage tells you how big a room is. It says nothing about what goes into it.

01 Scope

Moving walls or plumbing costs far more than keeping them.

02 Selections

Tile, stone, fixtures and cabinets range widely at any size.

03 Density

Baths pack plumbing, tile, glass and wiring into a few feet.

04 The house

Age, structure and what is hidden behind the walls.

A REAL EXAMPLE

Two primary suites, two very different prices

Suite A • about 565 sq ft

~\$186,000

Quartz slab shower, walls and ceiling • 11-ft custom vanity, glass towers, lighting • Coffee bar, bedroom lighting, full wallpaper

Suite B • about 440 sq ft

~\$135,000

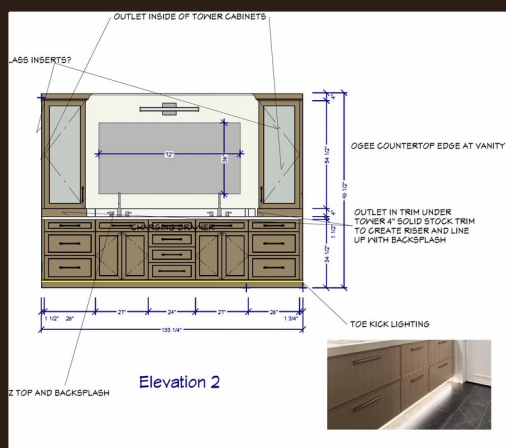

Wall removed to rework bath and closet • Tiled shower with bench, niches, arched door • 8-ft vanity, backlit mirror, limewash walls

Suite B removed a wall and still cost about \$51K less. Selections drove the difference.

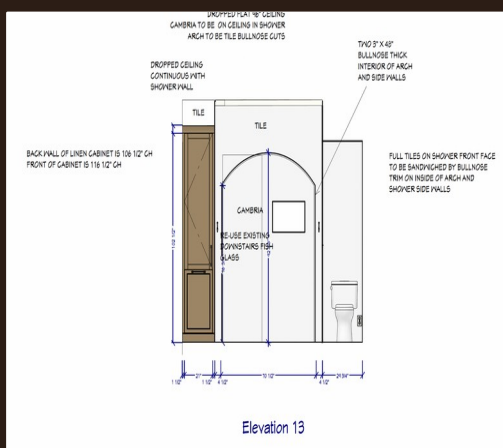

Prices cover the full suite: bath, closet and bedroom.

FROM DESIGN TO REALITY

Drawn and rendered before it's built

Vanity wall, drawn

Shower wall, drawn

SHOWER WALL, RENDERED

Every wall is drawn and dimensioned before we price it. The rendering is the plan the crew builds from, priced before the contract is signed.

FROM DESIGN TO REALITY

The same walls, built

These progress photos show the vanity and shower walls from the drawings and rendering, built from the plan that was priced before construction began.

The arched shower even reuses a decorative glass panel from the home's original downstairs bath.

Cost vs. what you get back

RECOUPED

Minor kitchen, midrange

Cost \$28,567 · Resale value \$31,197

109%

Bath remodel, midrange

Cost \$25,609 · Resale value \$19,273

75%

Bath remodel, upscale

Cost \$80,222 · Resale value \$33,222

41%

Major kitchen, midrange

Cost \$81,076 · Resale value \$40,660

50%

Major kitchen, upscale

Cost \$161,511 · Resale value \$57,380

36%

Primary suite addition, upscale

Cost \$338,323 · Resale value \$63,767

19%

TWO TAKEAWAYS

Remodel for how you'll live. Most projects return well under their cost at resale.

Scope drives price. Same bathroom, roughly three times the cost from midrange to upscale.

Standardized example projects, not real jobs. Source: 2025 Cost vs. Value Report, South Atlantic region, Journal of Light Construction.

PRICING

Fixed price. No vague allowances.

ALLOWANCE-BASED BID

Placeholder amounts for things not yet chosen

Real costs show up after you shop

Overages arrive as change orders mid-project

OUR FIXED CONTRACT

Scope, plans and selections set before you sign

Options priced side by side as you choose

Thorough preconstruction catches most surprises early

You see what each option costs before you choose, so the number you sign is the number you plan around.

What to bring to a first meeting

01 Your scope

Must-haves, nice-to-haves and what bugs you today.

02 Inspiration

Photos, saved boards and rooms you love (or don't).

03 A budget

Even a range. It shapes every recommendation.

Without these, there is nothing to price. With them, we can give you a much more accurate range.

WHY WE ASK ABOUT BUDGET

A budget helps us design around what matters most to you.

We see ourselves as stewards of your investment. Knowing your number lets us guide you honestly: where to spend, where to save, and how to fit as many of your needs and wants as possible into a project you feel great about.

And we will always tell you plainly what your number can and can't do.

KEY TAKEAWAYS

Five things to take with you

01 Scope drives price.

Not square footage.

02 Bring your homework.

Scope, photos and a budget.

03 Design before you sign.

Price a finished plan.

04 Avoid vague allowances.

Price real selections.

05 Decide during design.

Paper changes beat field changes.

YOUR NEXT STEP

Start a list of what you want and why. It's the best first step with any builder.

TAKE IT HOME

Two resources for your planning
